

Affiliate Metrics & Optimization Guide

Product 24 - Affiliate Metrics & Optimization Guide

Niche: Affiliate Marketing

Format: KPI guide + tracking template

Perceived value: \$57

What gets measured gets improved. Most affiliates guess; the pros track. This guide gives buyers the ****key metrics to watch, what they mean, and how to optimize each one**** - so they turn the same traffic into more commissions.

What's inside

- This guide - the affiliate funnel metrics + how to improve each
- tracking-template.md - a simple campaign tracking sheet

The affiliate funnel (and the metric at each stage)

Impressions -> Clicks -> Opt-ins -> Clicks to offer -> Sales -> Revenue
| | | | | |
CTR visitors opt-in % CTR to offer conv % EPC

The metrics that matter (and benchmarks)

Metric	What it means	Lever to improve it
CTR (content/ads)	% who click	Better hooks, titles, thumbnails
Opt-in rate	% who join your list	Stronger lead magnet + headline
Click-to-offer rate	% who click your affiliate link	Better bridge/review copy, clearer CTA
Conversion rate	% of clicks that buy	Better offer fit + bonus stack
EPC (earnings/click)	avg \$ per click sent	Higher-converting offer + bonuses
Refund rate	% refunded	Promote quality, set right expectations
Email open rate	% who open	Better subject lines, list hygiene
ROAS (paid)	revenue / ad spend	Kill losers, scale winners

EPC is your north star: it tells you how much each click is worth, so you know how much you can spend to get one.

The optimizationloop

1. **Measure** one campaign end to end.

2. **Find the weakest step** (where the biggest % drop happens).
3. **Change ONE thing** at that step (one variable at a time).
4. **Re-measure** and compare.
5. **Keep the winner**, repeat on the next weakest step.

Common weak points + fixes

- **Low CTR:** weak hook/title -> use Products 17 & 7.
- **Low opt-in:** weak lead magnet/headline -> use Products 6 & 17.
- **Low click-to-offer:** unclear bridge/review -> use Products 2, 10, 11.
- **Low conversion:** wrong offer or weak bonus -> use Products 20 & 2.
- **High refund:** overpromising -> be honest, set expectations.

How to use (for the affiliate)

1. Set up the tracking sheet (tracking-template.md).
2. Run one campaign and fill in the numbers.
3. Find your weakest step and apply the matching fix.
4. Change one variable, re-measure, and iterate.

Campaign Tracking Template

Copy this into a spreadsheet (Google Sheets/Excel) or fill it in per campaign.

Campaign info

- Campaign name: _____
- Offer: _____ Network: _____
- Traffic source: _____
- Dates: _____ to _____
- Spend (if paid): \$_____

Funnel numbers

Stage	Number	Rate	Target
Impressions / reach	` _____ `	-	-
Clicks (to your page)	` _____ `	CTR: ` ____ % `	
Opt-ins	` _____ `	Opt-in: ` ____ % `	20-40%
Clicks to offer	` _____ `	` ____ % `	
Sales	` _____ `	Conv: ` ____ % `	1-10%*
Revenue (commissions)	` \$ _____ `	EPC: ` \$ _____ `	
Refunds	` _____ `	Refund: ` ____ % `	< 10%

lvaries widely by traffic temperature and offer*

Email (if used)

Email	Sent	Open %	Click %	Sales
1				
2				
3				

Paid ads (if used)

- Total spend: \$_____
- Revenue: \$_____
- **ROAS** (revenue / spend): _____
- Cost per click: \$_____ Cost per lead: \$_____

Analysis

- Weakest step (biggest drop-off): _____
- One change I'll test next: _____
- Best-performing asset (email/post/ad): _____
- Decision: scale / optimize / kill

Running totals (track over time)

Month	Clicks	Sales	Revenue	EPC	Best channel

Track every campaign. Over time your EPC tells you exactly what a click is worth - and that's the number that lets you scale with confidence.
