

AI Automation Guide for Affiliates

Product 19 - AI Automation Guide for Affiliates

Niche: AI + Affiliate Marketing

Format: Automation workflows + setup guide

Perceived value: \$67

Stop trading hours for tasks. This guide shows buyers how to **automate the repetitive parts of an affiliate business** using AI + no-code tools (Zapier, Make, etc.) - so the machine runs while they focus on growth.

What's inside

- This guide - 10 high-leverage automations + how to build them
- workflows.md - step-by-step recipes for each automation

The automation mindset

Automate anything that is **repetitive, rule-based, and time-consuming**. Keep the human touch for strategy, relationships, and creative direction. The goal isn't to remove yourself - it's to remove the busywork.

The tool stack (pick what fits)

Layer	Examples
Trigger/connect	Zapier, Make (Integromat), n8n
AI brain	ChatGPT/Claude API, or built-in AI steps
Email	Your autoresponder (most have automations)
Content	AI writing/scheduling tools
Storage	Google Sheets / Airtable as a simple database

You don't need all of this. Start with ONE automation that saves you the most time.

The 10 highest-leverage automations

1. **Lead capture -> autoresponder** - new opt-in instantly tagged + welcomed.
2. **AI content drafting** - feed a topic, get a draft email/post/caption.
3. **Social scheduling** - auto-post your batch across platforms.
4. **New comment/DM -> reply or route** - never miss a warm lead.
5. **Content repurposing** - one pillar piece auto-split into formats (Product 8).

6. **Lead scoring/segmenting**- tag subscribers by behavior for targeted promos.
7. **Sale notification-> bonus delivery** - auto-send bonuses on purchase.
8. **Review/mention monitoring**- get alerts for your niche keywords.
9. **Weekly report** - auto-pull your stats into one dashboard/sheet.
10. **AI research assistant**- auto-summarize offers, competitors, trends.

Where AI fits in each automation

AI handles the "thinking" steps: drafting copy, summarizing, classifying messages, generating variations, and personalizing. The no-code tool handles the "plumbing": moving data between apps and triggering actions.

How to use (for the affiliate)

1. Pick the ONE automation that saves you the most time.
2. Follow its recipe in workflows.md.
3. Test it with sample data before going live.
4. Add one more automation only once the first runs reliably.

Start small. One working automation beats ten half-built ones.

Automation Recipes

Each recipe = Trigger -> Steps -> Result. Build in Zapier/Make/n8n. Tool names are examples; use your equivalents.

Recipe 1 - Lead Capture -> Welcome

Trigger: New opt-in form submission.

Steps:

1. Add subscriber to your email tool with tag [lead-magnet - name].
2. Send the delivery email (with the lead magnet link).
3. Add a row to a Google Sheet for tracking.

Result: Instant delivery + organized list, zero manual work.

Recipe 2 - AI Content Drafting

Trigger: New row in a "Content Ideas" sheet.

Steps:

1. Send the topic to an AI step with a prompt (e.g., Product 8's prompts).
2. Receive the draft (email/post/caption).
3. Save the draft back to the sheet or a "Drafts" doc.

Result: A queue of drafts ready for you to edit and approve.

Recipe 3 - Social Scheduling

Trigger: Approved content in your sheet/doc.

Steps:

1. Push the content to your scheduler (Buffer/Publer/native).
2. Set the post time per platform.

Result: A week of content scheduled in minutes.

Recipe 4 - New DM/Comment -> Route

Trigger: New comment/DM with a keyword (e.g., "INFO").

Steps:

1. AI step classifies intent (question / lead / spam).
2. If lead: send a templated reply with your link.
3. Log the contact in your sheet.

Result: Warm leads handled instantly, even while you sleep.

Recipe 5 - Content Repurposing

Trigger: New pillar piece (blog/transcript) added.

Steps:

1. AI splits it into email, thread, carousel, and 3 video hooks (Product 8).
2. Save each output to your content queue.

Result: One piece becomes a week of content automatically.

Recipe 6 - Lead Scoring / Segmenting

Trigger: Subscriber clicks a link / opens X emails.

Steps:

1. Add/adjust a score field in your email tool.
2. Tag "hot" leads above a threshold.

Result: Promote to your warmest leads first = higher conversions.

Recipe 7 - Sale -> Bonus Delivery

Trigger: Purchase notification (network/email/webhook).

Steps:

1. Verify the buyer (receipt/affiliate ID).
2. Send the bonus download links automatically.
3. Tag them as "buyer" for future offers.

Result: Bonuses delivered instantly = fewer refunds, happier buyers.

Recipe 8 - Mention Monitoring

Trigger: New mention of your niche keyword (RSS/Google Alerts/social).

Steps:

1. AI summarizes the mention.
2. Send yourself (or a channel) a digest.

Result: Stay on top of trends and engagement opportunities.

Recipe 9 - Weekly Stats Report

Trigger: Scheduled (every Monday).

Steps:

1. Pull clicks/sales/opt-ins from your tools or sheet.
2. AI writes a short summary + suggests one focus for the week.
3. Email it to yourself.

Result: A standing dashboard without manual reporting.

Recipe 10 - AI Research Assistant

Trigger: You add an offer/competitor URL to a sheet.

Steps:

1. AI summarizes the offer: benefits, audience, objections, angle ideas.
2. Save the summary next to the URL.

Result: Faster offer vetting (pairs with Product 20).

Build one, make it reliable, then add the next. Automation compounds.
