

Paid Ads Swipe File

Product 13 - Paid Ads Swipe File

Niche: Affiliate Marketing / Paid Traffic

Format: 20 ad swipes + targeting guide

Perceived value: \$77

When you're ready to scale with paid traffic, blank-page syndrome kills momentum. This swipe file gives buyers **20 fill-in-the-blank ad swipes** (Facebook/Meta, Google, native, YouTube) plus targeting and budget guidance - so they can launch profitable affiliate campaigns faster.

What's inside

- This guide - ad frameworks, targeting, budget & scaling rules
- ad-swipes.md - 20 ready-to-adapt ad swipes by platform

The 3-part ad formula (every swipe uses it)

1. **Hook** - call out the audience or stop the scroll.
2. **Value/agitate** - the problem or the promise.
3. **CTA** - one clear action (-> your bridge/review/bonus page, *not* a raw affiliate link; most ad networks ban direct affiliate links).

Compliance first: send paid traffic to YOUR page (bridge, review, or opt-in), never straight to the vendor. Avoid income guarantees and banned claims.

Targeting starter guide

Platform	Start with
Meta (FB/IG)	Interest stacks around `[niche]` tools, authors, competitors; then lookalikes of your opt-ins
Google Search	Buyer-intent keywords: "`[product]` review", "best `[category]`"
YouTube	Placements on competitor/review channels; in-market audiences
Native (Taboola/Outbrain)	Broad, let the algorithm optimize on conversions

Budget & scaling rules

- Start small: [\$10-20]/day per ad set; one variable per test.

- Judge on **cost per lead / per click-to-offer**, not likes.
- Kill losers after enough data (e.g., spend = 1-2x target CPA, no conversion).
- Scale winners slowly (20-30%/day) or duplicate into new audiences.
- Always retarget page visitors who didn't buy (highest ROAS).

How to use (for the affiliate)

1. Pick swipes matching your offer + platform.
2. Fill the [brackets]; match the angle to your page.
3. Launch 3-5 variations, let data pick the winner.
4. Point ads to your bridge/review/opt-in page (Products 10, 11, 6).
